Project Development Phase

Model Performance Test

Date	1 October 2026
Team ID	SWTID-2026-8643
Project Name	Script-Controlled ACL - Restrict Record Access Based on Field Value
Maximum Marks	

Model Performance Testing:

Project team should enter the following information in the model performance testing template.

S.No.	Parameter	Values	Screenshot
1.	Model Summary	ServiceNow security setup using a custom table (Institution Details, u_institution_details), custom roles and script-controlled Access Control Lists (ACLs) for record-level access. • **Object and fields:** Student Roll Number (auto number), Student Name and Faculty Name (reference: User), Branch (choice: ECE, EEE, CSE), Email, Phone Number, Description. • **Roles:** bb1 (read), bb2 (create), bb3 (write), bb4 (delete), all assigned to the EEE User. • **READ ACL:** Requires bb1 with the data condition Branch is EEE and an advanced script. Admins keep full access. • **CREATE, WRITE and DELETE ACLs:** Require bb2, bb3 and bb4 respectively. **Note:** A record is shown or changed only when both the user's role and the record's Branch value satisfy the ACL. Otherwise access is denied and no records are displayed.	*Table columns and the READ ACL with its Data Condition and script.*
2.	Accuracy	**Training Accuracy:** 100%. All 4 roles, the table and 4 ACLs were configured correctly. **Validation Accuracy:** 100%. All role-based scenarios matched the expected behavior: • bb1 user sees only the 2 EEE records out of 6. • A user without the role sees no records. • Admin sees all 6 records. • bb1 and bb2 users also get the New button. • bb1 to bb3 users can edit records. • bb1 to bb4 users can delete records.	*EEE-only list, empty list for a user without the role, and the admin full list.*

3.	Confidence Score (Only YOLO Projects)	Not applicable. This is not a YOLO or object-detection project.
