Project Development Phase

Performance Test

Date	1 October 2026
Team ID	SWTID-2026-8643
Project Name	Script-Controlled ACL - Restrict Record Access Based on Field Value
Maximum Marks	

Model Performance Testing:

Project team should enter the following information in the model performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	The project uses ServiceNow rather than Tableau. The data rendered is the custom table Institution Details (u_institution_details), shown as a list view. • 6 student records with Branch values ECE, EEE and CSE. • Columns: Student Roll Number, Faculty Name, Student Name, Branch, Email, Phone Number, Description. • Rendered differently by role: bb1 user sees 2 EEE records, a user without the role sees none, admin sees all 6. *Screenshot: the admin full list and the EEE-only list.*
2.	Data Preprocessing	Data preparation completed before testing the ACLs: • Created the EEE User and the roles bb1, bb2, bb3, bb4, then assigned the roles to the user. • Created the table with typed fields: Student Roll Number (auto number, INS000xxxx), Student Name and Faculty Name (reference: User), Branch (choice: ECE, EEE, CSE), Email and Phone Number (string), Description (multi-line string). • Entered sample records covering all three branches. *Screenshot: the table columns (dictionary entries) and the records list.*
3.	Utilization of Filters	**Data condition:** Branch is EEE on the READ ACL, so only EEE records are evaluated for access. **Role filter:** Requires role bb1 on the READ ACL; bb2, bb3 and bb4 on the CREATE, WRITE and DELETE ACLs. **Result:** The data condition matched 2 of 6 records. *Screenshot: the Data Condition section of the READ ACL.*

4.	Calculation fields Used	No Tableau calculation fields are used in this project. The equivalent logic is the READ ACL script, which returns true for admin (gs.hasRole('admin')), true for bb1 (gs.hasRole('bb1')), and false for everyone else. The Student Roll Number is also auto-calculated by the table's default number generator. *Screenshot: the Advanced Condition script.*

S.No.	Parameter	Screenshot / Values
5.	Dashboard design	No of Visualizations / Graphs: 0. No dashboard was built in this lab; results are shown as list views for three users (bb1, no role, admin). *Screenshot: the three list views, if a dashboard is not required.*
6	Story Design	No of Visualizations / Graphs: 0. No story was built in this lab; the verification outcomes are documented as list screenshots for the READ, CREATE, WRITE and DELETE ACL tests. *Screenshot: the verification screens for each ACL.*
